

# The EL-6 Microprocessor

## *A powerful and cost effective control center*

The EL-6 electronic control center is easy to use and ensures that the maximum productivity and the lowest cost of operation are obtained. The microprocessor controls the temperatures, water levels, speeds, and maintenance intervals. It can be programmed stand alone, with memory card, and with a PC. The EL-6 can also be programmed to display in many different languages (English, Spanish, German, Italian, and French).

- ❖ The Advance function allows steps to be skipped
- ❖ The two line display shows the current step as well as the ending condition (time, temperature or water level).
- ❖ Incredibly flexible programming
- ❖ Programs are easily saved with a laptop or a memory card
- ❖ The EL-6 can store up to 30 programs. Each program can have 15 cycles. Each cycle can have up to 100 steps.
- ❖ The total memory capacity is 400 steps, distributed among all programs.
- ❖ Programs are composed from cycles - cycles are composed from steps.
- ❖ Once a cycle is created, it can be used in many different programs.
- ❖ Service functions include: Total and partial programs executed, working hours, maintenance request interval, disabling the advance function, and more.
- ❖ The Cycles are divided into groups to help organize programs
  - Prewash
  - Wash
  - Spin
  - Rinse
  - Unroll
